

1.3

HP3V SERIES

Swash-plate Type Axial Piston Variable Displacement Pump

Hengli swash-plate axial piston pump HP3V, the key parts of the pump are made of imported materials, quality strictly controlled, suitable for high-pressure hydraulic applications.

Apply to open hydraulic circuit

Displacements (cc/rev): 140

Rated pressure (bar): 350

Peaking pressure (bar): 400

Contents

Technical Data	02
Type introduction	03-05
Regulators introduction	06-11
Performance curves	12
Installation size	13
Setting of regulator and Max. displacement	25

Features

- Variable pump in swash-plate design for open circuit.
- High continuous pressure.
- Exceptional self-priming capability.
- Available with American (SAE) and Japanese (JIS) mounting flanges and shafts.
- Excellent reliability and long life.
- High power to weight ratio.
- Variety of control options.
- Optional through drive.
- Quick control response.
- Low pressure pulsation and low noise.
- Developed for engineering, mobile vehicles, Industrial and other industrial application.

Technical Data

Size		140
Displacement (cc/rev)		140
Pressure	Rated pressure (bar)	350
	Peak pressure (bar)	400
Rotation speed	Max for self-priming ^{*1} (rpm)	2150
	Max ^{*2} (rpm)	2500
Weight (Kg)		65
Quantity of oil to fill pump case (L)		1.4
Temperature Range (°C)		-20~95
Viscosity Range (mm ² /s)		10-1000 ^{*3} (The best use of viscosity range 16~36 mm ² /s)

Permissible through drive torque							
Input shaft code	S3	S4	S5	D3	D4	K3	K8
Input torque rating (Nm)	552	925	1470	990	1470	430	1000

- 1. Steady state suction pressure should be 0 bar and above(at normal condition);
- 2. If suction pressure less than 0 bar, Boost pressure should be required;
- 3. In case of 200-1000mm²/s, please allow system to warm up before using machine.

Regulators introduction

Code: L0 (L1)

Control Type :

1. Load sensing

Standard setting:15bar

Adjustment range:10bar-21bar

(It can be set to 38 bar at most, but it is not recommended to set it too high. If you need other settings, please consult our company.)
2. Pressure Cut-off

Standard setting:320bar

Adjustment range:21bar-320bar
- L1 option(difference from L0)

With the L1 option, the bleed off orifice(R4)is plugged, when this option is applied, there must be another bleed off orifice in the external valving to prevent trapped pressure.

Function and Features: Load sensing+ Pressure Cut-off

The load sensing control is a flow control option that operates as a function of the load pressure to regulate the pump displacement to match the actuator flow requirement. The load sensing control compares pressure before and after the sensing orifice and maintains the pressure drop across the orifice (differential pressure Δp) and with it the pump flow constant.

If the differential pressure Δp increases, then the pump displacement decreases, and if the differential pressure Δp decreases, then the pump displacement increases until the pressure drop across the sensing orifice in the valve is restored.

$\Delta p = P_p - P_a$

Pump displacement is controlled to match the flow requirement as a function of the system differential pressure(load pressure vs delivery pressure).In addition, there is a pressure cut off function incorporated into the control.

The pressure cut off control keeps the pressure in a hydraulic system constant within its control range even under varying flow conditions. the variable pump only moves as much hydraulic fluid as is required by the actuators. if the operating pressure exceeds the set point set at the pressure control valve, the pump displacement is automatically swivelled back until the pressure deviation is corrected.

Hydraulic Circuit:

Regulators introduction

Code: ☐ /1

Control Type :

1. Load sensing
Standard setting: 15bar
Adjustment range: 10bar-21bar
(It can be set to 38 bar at most, but it is not recommended to set it too high. If you need other settings, please consult our company.)
2. Pressure Cut-off
Standard setting: 320 bar
Adjustment range: 21 bar-320 bar
3. Torque limiting

Function and Features: /1 Load Sense and Pressure Cut-off with Torque limiting

The L0/L1 control functions as previously noted. In response to a rise in delivery pressure the swash plate angle is decreased, restricting the input torque. This regulator prevents excessive load against the prime mover.

The torque limit control module is comprised of two springs that oppose the spool force by the system pressure. By turning an outer and inner spring adjustment screw, the appropriate input torque limit can be set.

Hydraulic Circuit:

Regulators introduction

Code: □ /1-E0

Control Type :

- 1. Load sensing
Standard setting:15bar
Adjustment range:10bar-21bar
(It can be set to 38 bar at most, but it is not recommended to set it too high. If you need other settings, please consult our company.)
- 2. Pressure Cut-off
Standard setting: 320bar
Adjustment range: 21bar-320bar
- 3. Port Pr pressure: 20bar~45bar
- 4. Electromagnet characters

Voltage(V)	Current(A)	Resistance(Ω)	Insulation grade
12	0.89	7.3±10%(20°C)	H(180°C)
24	0.75	21.2±10%	UP to IP6K6/IPX9K

- 5. Connector (deutsch or Amp)
DEUTSCH: DT04-2P-E005
AMP: 174354-2、173706-1

Function and Features: /1-E0 Load Sense and Pressure Cut-off with Torque limiting

The L0/L1 control functions as previously noted. It controls the input torque of the pump by changing different current, specific current is related to certain input torque, thus satisfy needs of different torque on excavator

Hydraulic Circuit:

Regulators introduction

Code: ☐ /1-H0

Control Type :

- 1. Load sensing**
Standard setting:15bar
Adjustment range:10bar-21bar
(It can be set to 38 bar at most, but it is not recommended to set it too high. If you need other settings, please consult our company.)
- 2. Pressure Cut-off**
Standard setting: 320bar
Adjustment range: 21bar-320bar
- 3. Port Pr pressure:** 0bar~39bar

Function and Features: /1-H0 Load Sense and Pressure Cut-off with Total torque limiting

The L0/L1 control functions as previously noted. It controls the input torque of the pump by changing different input pressure of port Pr, specific current is related to certain input torque, thus satisfy needs of different torque on excavator.

Hydraulic Circuit:

Regulators introduction

Code:

***-EDO**

Control Type :

The displacement of a variable displacement pump can be adjusted via an electro-hydraulic proportional adjustment. Control current range is ca. 300 mA to ca. 800 mA(24VDC) or ca.600mA to ca.1600mA(12VDC)

Function and Features: Electric proportional displacement

The main pump is supplied with servo pressure via port St as soon as the servo pump is started. The solenoid is usually deenergized during start of operation, i.e. the valve piston is pushed against its stop by the metering spring. This opens a passage to the larger area of the piston which returns the swash plate to its idle position. There is always pressure apparent at the smaller side of the control piston.

When the solenoid is energized with 300 mA (24VDC-solenoid) or 600 mA (12VDC-solenoid) it will push the valve piston against the spring force thereby connecting the larger area of the control piston with the tank. The control piston will move the swash plate against the metering spring in direction of increased delivery flow and loading the metering spring. This movement will stop as soon as the forces of the metering spring and the proportional solenoid are balanced thereby closing the prop. valve.

Both total delivery flow and total stoke of the solenoid are achieved when the solenoid is energized with 800 mA (24VDC-solenoid) or 1600 mA (12VDC-solenoid). Use electro-proportional displacement control valve and swash indicator can realize the close circuit control of the pump.

Performance curves

HP3V 140 Performance curves

- 1.Values shown in above figures, excluding those for bearing life, are not guaranteed values, but mean level.Bearing life is basic rated life of calculation (reliability 90%);
- 2.Noise level of the pump is tested under silent circumstance (tested behind the pump about 1 meter);
- 3.Under actual working conditions, noise level of the pump may be higher than that in the curves.
